**DETAILED ACTION**

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

Claims 1, 2, 4, 6, 8-11 and 13, 14, 16, and 17 are rejected under 35 U.S.C. 102(e) as being anticipated by Barrall et al., (US 6,826,615).

As per claims 1, 2, 4, 6, 8-11, 13, 14, 16, and 17, Barrall teaches a method/system of determining when a frame of information comprised of one or more data buffers of information being transmitted in a network processor has completed transmission by a transmission system therein, comprising the steps of: providing a

Art Unit: 2182

plurality of buffer control blocks, each having space for control information to link one buffer to another for transmitting information in each data buffer, each of said buffer control blocks having a last bit flag bit having a first position wherein an additional data buffer is to be chained to a previous data buffer and a second position wherein no additional data buffer is to be chained to a previous buffer; (col. 14, lines 20-col. 18, lines 1-50, Fig. 12c) and supplying the position of said last bit flag bit in each buffer control block to the transmission system of said network processor. (Abstract, Figs. 1-12c).

As per claims 5 and 13, error correction code for buffer are well known in the art, thereby making use of this well known technique obvious to one of ordinary skill.

#### ***Allowable Subject Matter***

Claims 18 and 19 are allowed over the prior art.

Claims 7 and 15 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
